

USTN Offers Wide Coverage

USTN members tested seed corn at 53 locations – 41 conventional and 12 organic sites in 2018.

In 2018, USTN tested in 10 states:

Iowa	New York
Illinois	Ohio
Indiana	Pennsylvania
Kansas	Vermont
Minnesota	Wisconsin

Members include:

Seed Retailers	Researchers
Public Breeders	Private Breeders
Seed Treatment Developers	

The **US Testing Network** is a member-based organization founded in 2009. USTN's purpose is to coordinate a rigorous testing program to evaluate public and private corn germplasm.

The primary focus of USTN is to evaluate germplasm under development for the **ORGANIC** and **NON-TRANSGENIC** grain industry. To achieve that goal, USTN's members provide corn to be tested, locations for testing or financial support.

Practical Farmers of Iowa coordinates the testing.

"From its beginnings as a conversation at the UMOFC, we have strongly supported USTN. There is a real need for a rigorous, independent testing network that supports the breeding and development of Non-GMO hybrid seed corn."

Mac Ehrhardt
Albert Lea Seed

2018 USTN LOCATIONS

Types of Tests:

Conventional

- ⇒ Treated or untreated entries
- ⇒ Most entries are untraited
- ⇒ Locations managed conventionally
 - ⇒ no glyphosate or glufosinate
 - ⇒ nitrogen applied is green manure or synthetic fertilizer
 - ⇒ insecticide/fungicide usage based on location needs

Organic

- ⇒ Untreated and untraited entries
- ⇒ Locations managed organically
 - ⇒ certified or certifiable organic
 - ⇒ some may be conventional locations managed organically for the test

4 to 5 locations per test

2 replicates per entry

2 or 4 row plots ~ 20 ft

~2000 kernels per entry

no minimum # entries

\$300 per entry

Current & Past Participants:

Adaptive Symbiotic Technologies
Albert Lea Seed
Beck's Hybrids
Blue River Hybrids
Brownseed Genetics
Camerar Farms
Cornell University
CRD Advisors
CROPP Cooperative
DKD Genetics
