

Retrofitting Old Equipment with New Technology on a Budget

Practical Farmers of Iowa
January 17-18, 2020
Jim Poyzer
jim@outfarming.com

What's here?

- Show low cost technology available
 - Things I've built
 - What others are doing
 - Free stuff you should consider
- Resources for you

16 Things I've Built

- It started with a one row test stand to check the performance of my Precision TM corn finger meters.
- A planter monitor to show skips and doubles, population, speed.
- An advanced planter monitor that keeps data.
- An app to record field info with pictures and text with locations flagged on a field map.
- An app to locate soil sample spots.
- Exporting / importing soil sample info into SMS TM mapping software. Migrating to free QGIS mapping software.
- A spreadsheet for deciding what nutrients and micronutrients are needed using an Open Office spreadsheet (free).

- I added a Duo-Rate device to my planter to vary population – and added the ability to do it with a prescription map.
- Liquid flow monitoring with flow meters and an app.
- Radar replacement for my old Raven sprayer controller.
- RTK for my Ag Leader autosteer.
- Capturing soil and air temps, moisture with solar powered remote sensors.
- Seed counter for accurate yield calculations. Put my app on the Internet.
- Internet of Things: Building random sensors and controllers. Controlling Christmas tree lights from my website.
- Remote on/off switch. Built for testing liquid flow on my planter.
- 3D printing replacement parts, cases, tablet holders.

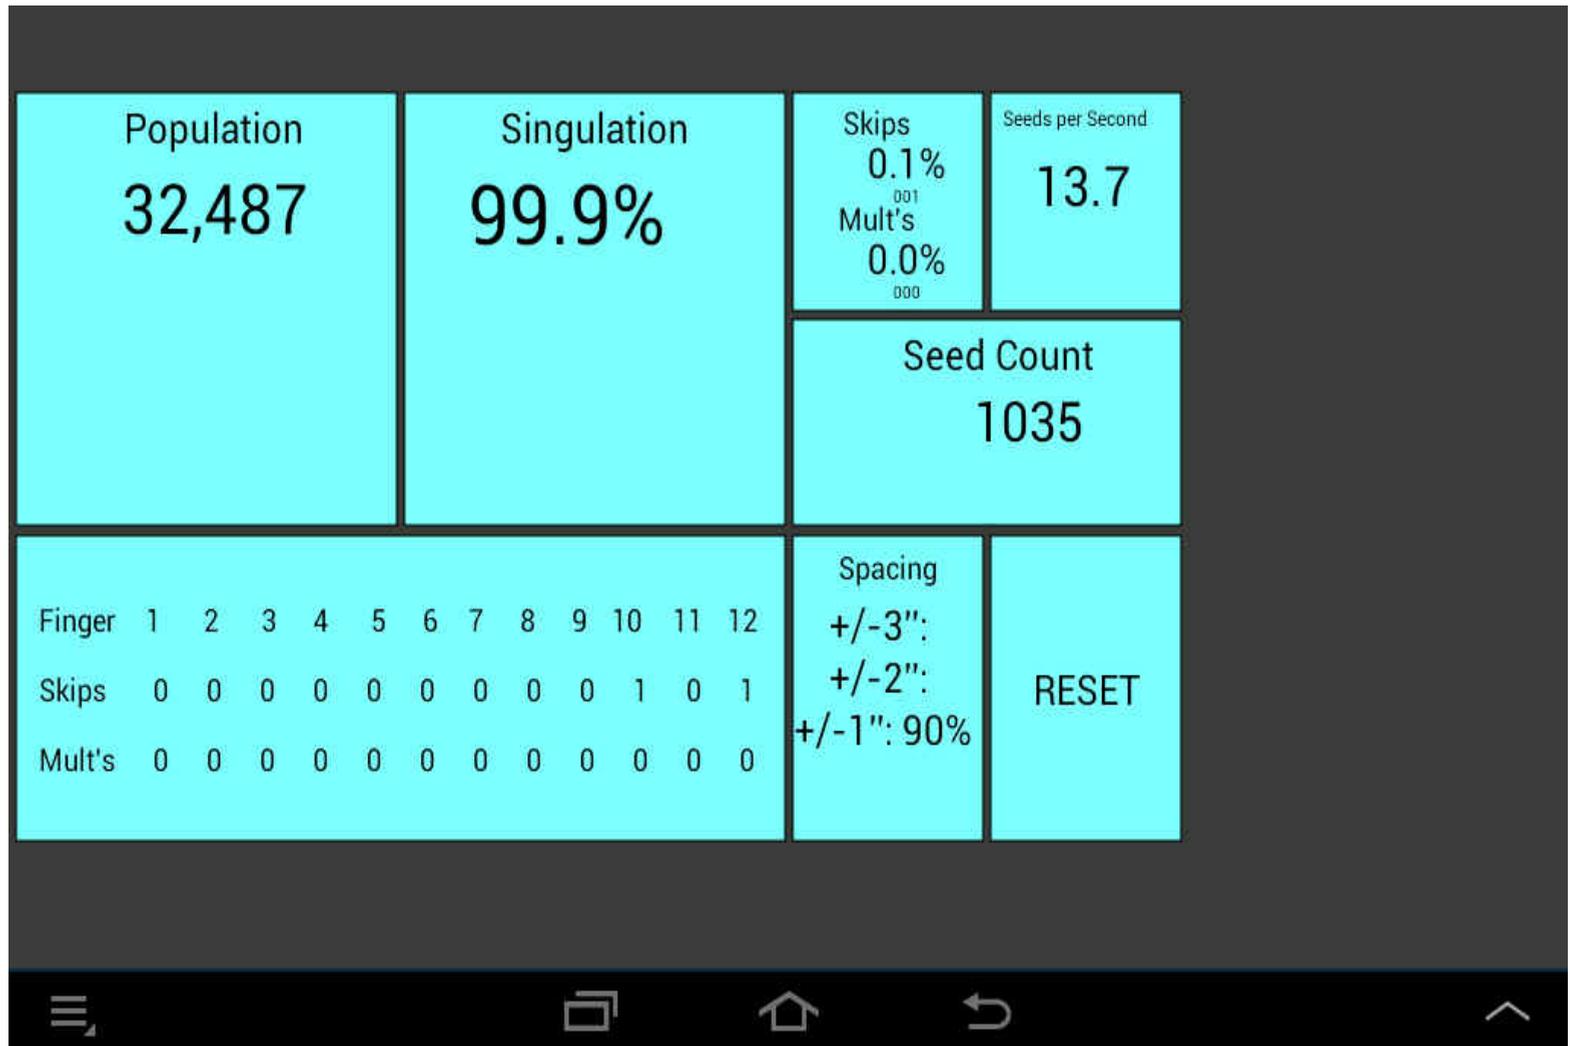

Seed meter test stand

- Bought one row unit from Colfax
- Added legs, a gear motor & sprocket
- Regular seed tube & sensor
- Arduino Uno R3, prototyping board. Design is on my website.

Findings:

- Great way to find problems
- Test seed sizes for best settings
- Buy medium round seeds

Seed meter app with finger info

Forced to move to 12 row planter

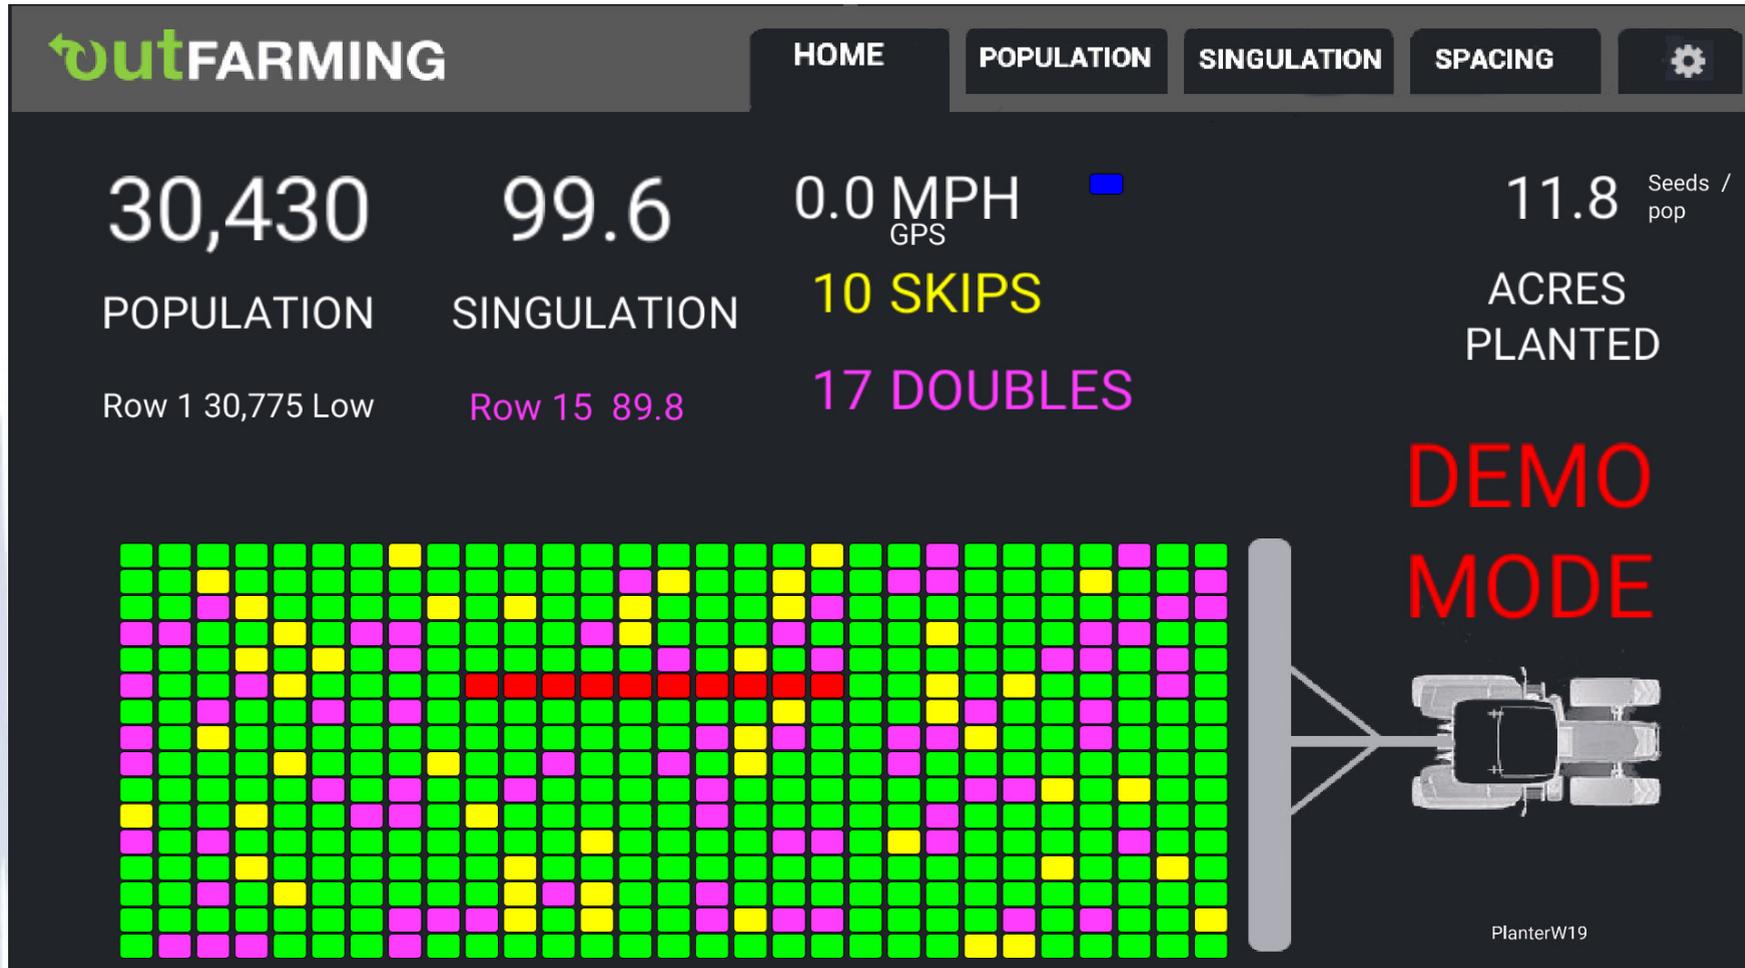

Vac test stand using vacuum cleaner

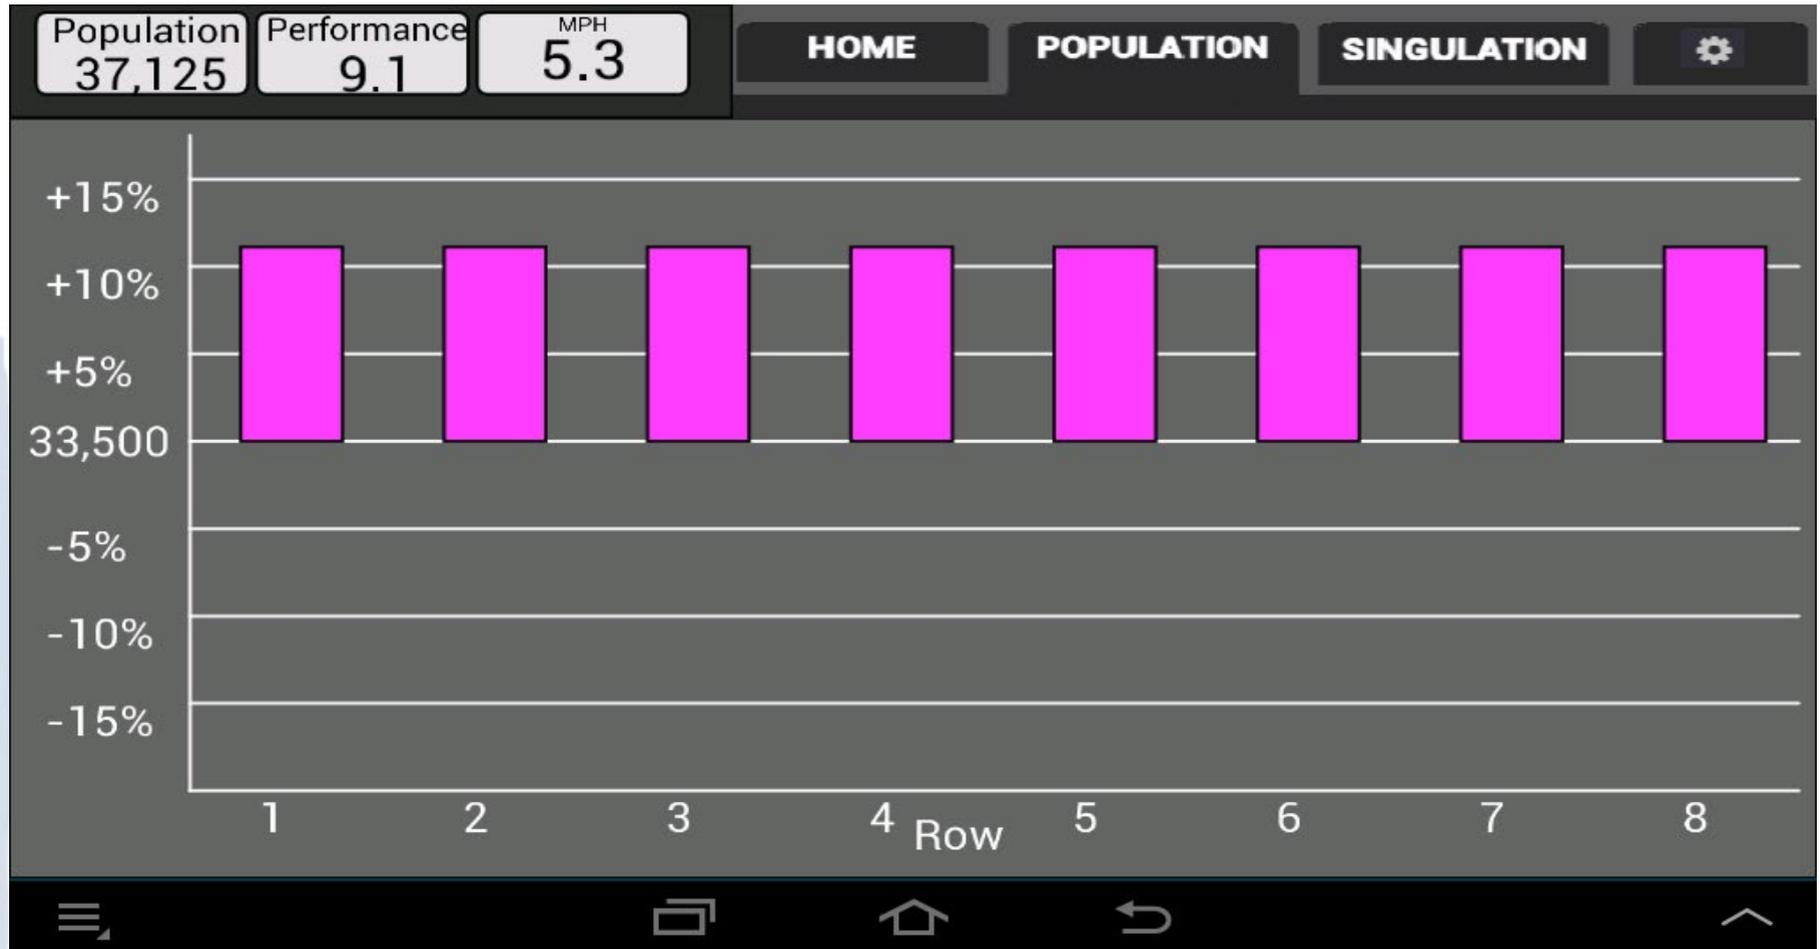

App with spacing info

- ★Food grade: Liquid passed through is safe to drink.
- ★G1/4 inch Quick-Connect: Easy installation and removal, suitable for 1/4" tube and works with most Reverse Osmosis filtration systems.
- ★Flow range:0.3-10L/min, working voltage range: DC 5-18V.
- ★Waterproof, heat resistance, pressure resistance, cold resistance.
- ★Sensor: Hall effect. Application:water heater thermostat, water purifier, boiler, water dispensers, coffee machines, smart card equipment, the boiler and so on.

2018 - Test on 3 rows

2019 – how do I hold 12 in a row?

**A General Guide for
Crop Nutrient and Limestone
Recommendations in Iowa**

IOWA STATE UNIVERSITY
Extension and Outreach

PM 1688 Revised October 2013

Look at the fine print for Iowa pH

Table 15. Zinc recommendations for corn and sorghum production.

| Soil Test Category | Zinc Soil Test (ppm) | | |
|-----------------------|---------------------------------------|----------|----------|
| | Low | Marginal | Adequate |
| DTPA Extractable Zinc | 0-0.4 | 0.5-0.8 | 0.9+ |
| | Zinc to apply broadcast (pounds/acre) | | |
| | 10 | 5 | 0 |
| | Zinc to apply in band (pounds/acre)* | | |
| | 2 | 1 | 0 |

*Recommendation for amount to apply in band is based on other states' information.

Recommendations are given to increase soil pH to 6.0, 6.5, or 6.9. Soil pH 6.9 is recommended for alfalfa or alfalfa-grass mixed hay. Soil pH 6.5 is sufficient for other forage legumes or legume-grass mixtures. For corn and soybean, soil pH 6.5 is considered to be sufficient for most soils, but 6.0 is sufficient in areas with high-pH (calcareous) subsoil to a four-foot depth of the surface. General soil associations that include several soil associations) with low or high subsoil pH have been summarized in Figure 1. The soil association areas with high pH subsoil include Clarion-Nicollet-Webster, Galva-Pringhar-Sac, Moody, Monona-Ida-Hamberg, Marshall, and Luton-Onawa-Salix. Therefore, when liming is required for corn or soybean, lime is recommended to raise soil pH to 6.5 for fields in soil association areas with low subsoil pH, and to 6.0 in association areas with high subsoil pH.

6.0 pH for 1/3 of Iowa

The amount of lime material to be applied should be adjusted for the incorporation depth from tillage, which determines the volume of soil to be neutralized. The recommended sampling depth for no-tillage, strip-tillage, haylands, or pastures is 2 to 3 inches. It is very important that the laboratory knows the sampling depth. Samples taken from a 6-inch depth for P and K testing can be used for lime requirement determination, but lime application rates should be adjusted to about one-half of the amounts recommended for a 6-inch depth. A footnote in Table 16 shows the equations derived from calibration data used to calculate the amounts of CaCO₃ needed to raise soil pH to desired levels.

Table 16. Lime recommendations based on SMP or Sikora buffer pH methods, given in pounds per acre of finely ground pure calcium carbonate (CaCO₃) to increase soil pH from its present level to pH 6.0, 6.5, or 6.9 for the soil depth to be neutralized.†

| Buffer pH | Depth of Soil to be Neutralized | | | | | | | | |
|-----------|--|--------|--------|----------|--------|--------|----------|--------|--------|
| | 2 inches | | | 3 inches | | | 6 inches | | |
| | pH 6.0 | pH 6.5 | pH 6.9 | pH 6.0 | pH 6.5 | pH 6.9 | pH 6.0 | pH 6.5 | pH 6.9 |
| | Amount of Calcium Carbonate to Apply (pounds/acre) ‡ | | | | | | | | |
| 7.0 | 0 | 0 | 400 | 0 | 0 | 600 | 0 | 0 | 1,100 |
| 6.9 | 0 | 0 | 600 | 0 | 0 | 1,000 | 0 | 0 | 1,900 |
| 6.8 | 0 | 200 | 900 | 0 | 300 | 1,400 | 0 | 600 | 2,700 |

| 5.7 | 1,600 | 2,900 | 3,900 | 2,500 | 4,300 | 5,900 | 4,900 | 8,600 | 11,800 |

† For corn and soybean, soil pH 6.5 is recommended in soil association areas without calcareous subsoil and soil pH 6.0 is recommended in areas with calcareous subsoil (see text and Figure 1). Soil pH 6.9 is recommended for alfalfa and alfalfa-grass mixtures in all soil association areas. Soil pH 6.0 is recommended for other forage legumes or legume-grass mixtures and grasses in all association areas.

‡ Amounts were derived from the following calibration equations and rounded to 100 pounds:
Pounds of CaCO₃ to raise pH to 6.0 = [38619 - (5915 x Buffer pH)] x [Depth x 0.167]
Pounds of CaCO₃ to raise pH to 6.5 = [49886 - (7245 x Buffer pH)] x [Depth x 0.167]
Pounds of CaCO₃ to raise pH to 6.9 = [58776 - (8244 x Buffer pH)] x [Depth x 0.167]

CNW, GPS, Mo,MIH,M,LOS area lime to 6.0 pH

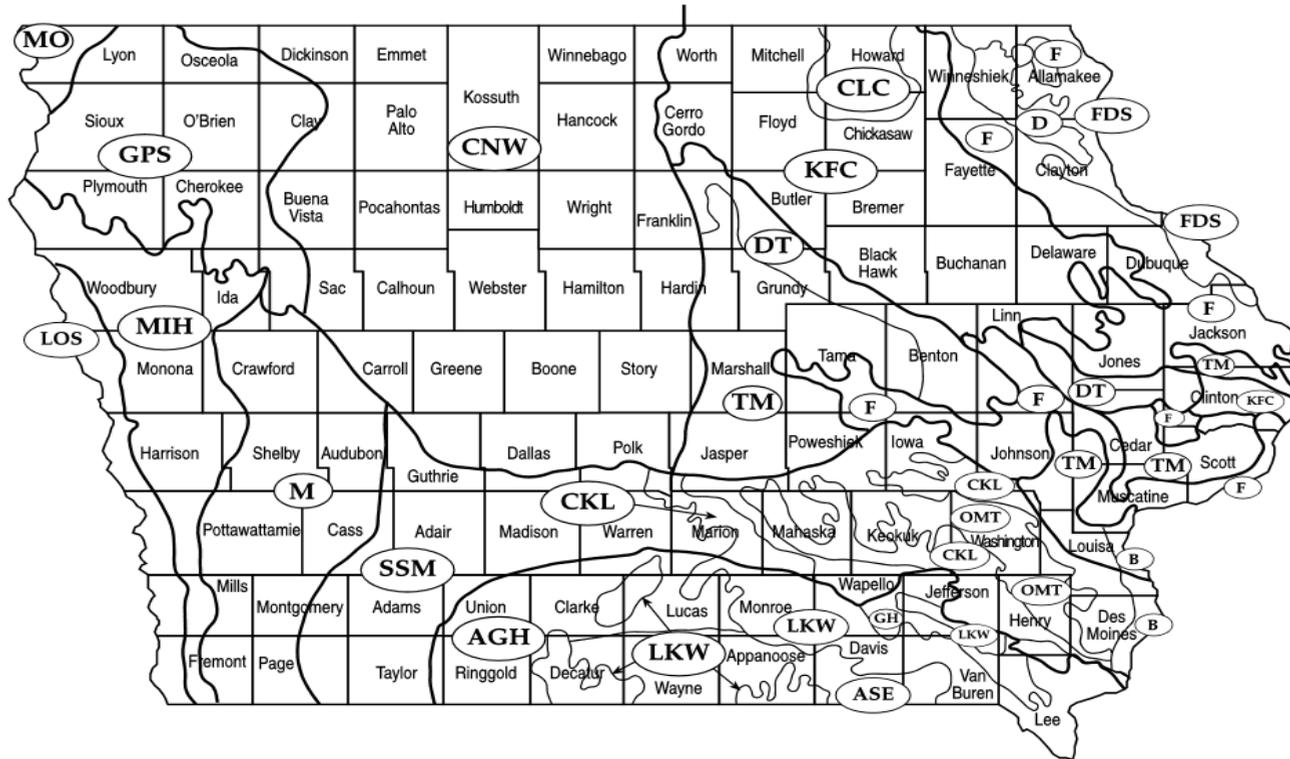

Figure 1. Map of Iowa delineating the 21 principal soil association areas (letters). B designates the Mississippi bottomland.

What others are doing

- Variable rate planting: Duo-Rate device
- FarmerBrianTee – AgOpenGPS search YouTube.
- Kyler Laird – driverless tractors planted corn in Sac City, IA in 2019. Robotic soil sampling with a go kart.
- Yield monitor: DIY'er went production. FarmTRX – \$1,849
- Pioneer's yield estimator app
- Purdue University agBOT

AgOpenGPS open source autosteer

The screenshot displays the AgOpenGPS software interface. At the top, the title bar reads "AgOpenGPS - Fred_Seed_Default_2019.Dec.02.10_29". The top status bar shows "5Hz 5 Sim: 4.9 Hz" on the left, a red " $\leftarrow 0$ " in the center, and "5.4 km/h" on the right. The main 3D view shows a tractor on a field with a dashed orange path. A central "AB Line" control panel is overlaid, featuring buttons for "A" and "B", a numerical display showing "0.0009", and buttons for "-0.1" and "+0.1". Below these are power, left, and right arrow buttons. A right-side toolbar contains various icons for navigation and control. The bottom status bar shows "114 m 0.02" on the left, a steering wheel icon with "Off 0.0°" in the center, and "Default - 3 m" on the right. The Windows taskbar at the bottom shows the system tray with the time "11:12 AM".
